Abstract (en)
[origin: WO2007138420A2] A household washing machine, in particular a dishwasher, is described which comprises: a wash tub adapted to wash crockery through washing means comprising sprayers adapted to spray a washing liquid, in particular water, to which at least two different types of washing agents are added during the wash, said at least two different types of washing agents comprising a multiphase preparation; heating means adapted to warm up said washing means in said wash tub; means for managing and controlling the operation of the washing machine, comprising a control system, in particular electric or electronic type, implementing at least one wash programme or cycle. The invention is characterized in that said wash cycle is implemented by said control system independently of the type of washing agent used, and comprises wash steps being so structured that good wash results are ensured with any type of washing agent.
