Abstract (en)
[origin: DE102006028548A1] The roof (1) has a middle part (2) that is displaceably guided relative to a vehicle body by primary actuating kinematics (12). A rear part (3) is displaceably guided relative to the middle part by secondary actuating kinematics (14). The primary and secondary kinematics are coercively coupled, where a relative position of joints that are position-determined in an area for the middle part is changed with respect to each other such that the middle part is partially lifted. A main guider (12b) is connected with a guider and is fastened in one of the joints.
