Abstract (en)

[origin: DE102006024679A1] The device (27) has a pump light source (30) to supply a pump light, and a laser device (26) to generate a laser light (24) for radiation into a combustion chamber. A light guide mechanism (28) transfers the pump light from the pump light source to the laser device. The laser device has a refraction device that is arranged as a single piece and refracts a part of the pump light. The laser device has a laser-active solid body, where the refraction device has a lens, which is arranged at a coupling side of the solid body.
