Abstract (en)

[origin: US2009314775A1] The invention relates to a label to be used as a security feature with a substrate layer and with an optically changeable section which can be microstructured, wherein the optically changeable section is connected to the substrate layer. Thus, the technical problem of creating a label of the type previously mentioned which is simple, reliable, and tamper-proof is solved. The substrate layer of said label is provided with at least one recess which is arranged along a line which runs slightly below the optically changeable section. The invention also relates to a packaging, in which at least one label with a container is connected to a closure having at least one recess arranged in the area between the container and the closure.
