Abstract (en)
[origin: CA2653649A1] A protection switch (1) is disclosed, which is particularly suitable for being manufactured in a streamlined way. The protection switch (1) comprises at least one single-pole protection switch module (2). Multiple protection switch modules (2) can be arranged next to each other in sequence to form a multi-pole protection switch arrangement, so that the protection switch modules (2) form a mechanically contiguous unit, the manual activation mechanism (42) being coupled to all protection switch modules (2) so that the protection switch modules (2) can only be switched at the same time, and the release mechanism (44) being coupled to all the protection switch modules (2) so that by using the release mechanism (44) of one of any of the protection switch modules (2), all other protection switch modules (2) can be released. A one-piece coupling part (120) is thereby provided, which can be inserted between adjacently positioned protection switch modules (2) and which both serves to mechanically fix the protection switch modules (2) to each other, and also effects a coupling of the manual activation mechanism (42) and the release mechanism (44) of both protection switch modules (2).
