Abstract (en)

[origin: EP2030554A2] The cleaner has a cartridge-like transverse-shaped filter frame (37) arranged in an exhaust air flow of an engine blower for retaining fine filters. The frame is guided as a drawer into a filter retainer (102) of a housing part (5) of the cleaner, and is pressed with an edge contour (372) under an intermediate layer of a seal at a contour of the retainer in a guided condition. A pivotably supported air-permeable lining element (100) covers the retainer in the guided condition, and diverts a force resulting from pivoting movement from a guiding direction (104) to a pressing direction (108).
