Abstract (en)

[origin: EP2030944A2] The extractor device (1) is adapted for insertion into an opening of a beverage container and comprises a housing (2) having a beverage passage (11), in which a valve body (13) is displaceable between a closed position and an open position. The valve body is biased against its closed position, and a down tube (10) extends from the housing in order to lead beverage from the lower part of the beverage container into the beverage passage. The extractor device (1) is provided with a friction increasing coating (29) suitable for preventing unauthorized removal of the extractor device from the opening of the beverage container after insertion into the opening,
