Abstract (en)  
[origin: EP2031143A1] The partition construction has translucent, opaque or transparent wall panels (7.7-7.10) formed as factory-built insulation-glass units, where the insulation-glass units are mounted without frames. A spacer profile is formed on each wall panel on a peripheral side in order to fix the wall panel on a floor and a ceiling and/or with an adjacent wall panel using fastening devices that are invisible from outside, where one wall panel exhibits a door (42) with a door lock that is accommodated inside the wall panel. An independent claim is also included for a method for constructing a partition construction.
