Abstract (en)
[origin: EP2031327A2] The method involves guiding a chilled air flow from a head part (13) directly into storage rack blowers that are arranged under the head part. A chilled air is passed from a top blower to a bottom blower, where the chilled air enters into a collecting space (15) from the bottom blower. The space is arranged below the bottom blower. The chilled air is exhausted from the space via a refrigerator (5). The chilled air flow is guided to doors (11) of goods presentation furniture (1) via the rack blowers in a distance (A), so that no condensate settles at disks of the doors. An independent claim is also included for a goods presentation furniture for presentation of cooling or freezing goods.
