Abstract (en)
[origin: EP2031468A1] The watch has a function indicator arranged between a screwed control crown (8) and a dial. The crown is arranged on a periphery of a sealed case, and has a rotational axis (14) that is parallel to the dial. The indicator is controlled by axial displacement of the crown via a transmission mechanism (30). The mechanism has a flat slide (35) partially mobile with the rotational axis of the crown. The slide has a lateral finger (40) engaged in an annular groove (41) of a rotative sleeve (15) integrated with the crown.
