Abstract (en)
[origin: EP2031567A2] The system has a cash machine containing a lockable and exchangeable bank note case (14) e.g. bank note cassette. A pay-office has a cash vault (26) with a docking station (28) for the bank note case. The bank note case is coupled with an attachment holder (24) for transportation between cash stations and the pay-office by an interface and a coupling device. An activatable safety device of the attachment holder and the bank note case are designed such that the safety device is inoperative when opening the bank note in the bank note case.
