Abstract (en)
[origin: EP2031604A2] The conductor has wires (3, 4, 5, 6) comprising an insulation and surrounded by a common shell from an insulating material. A non-metallic pulling and bulging-stable carrier (1) is arranged in a core (K) and surrounded by a layer (2) from insulating material. The layer from the insulating material is surrounded by a sliding layer from a material e.g. polytetrafluoroethylene, with good sliding properties. The carrier comprises fibers that are embedded completely in a binding material e.g. polyester resin.
