Abstract (en)
[origin: EP1872765A1] The pack (20) has a receiving compartment (22) closed by a foil for a product composition. The receiving compartment is arranged in a matrix form with lines for an application stage and an opening for application times during daytime. A storage device (50) stores application data of the product composition of a certain person for a fixed period of one week, where the storage device is designed as a flash-storage unit. An output device produces an application-reminder signal for a reminder at the specified product application time based on the stored application data. An independent claim is also included for a method for automated packing of an individually specified product composition e.g. medicine.
