Abstract (en)

[origin: WO2007147457A1] The invention relates to a dispensing device (2) for the substantially simultaneous delivery of at least two preparations (4, 13), different from each other, from a package (3). Said device comprises at least one delivery element (6) for delivering a first preparation from the package to the surroundings and an actuating element (5) which is coupled to the delivery element in such a manner that, when the actuating element is actuated, at least the first preparation is delivered from the package, the dispensing device comprising a connection (8) which communicates with the delivery element, to which at least one portion cartridge (12) which contains a second preparation, different from the first preparation present in the package, is detachably coupled in such a manner that actuation of the actuating element effects delivery of the first preparation and the second preparation.
