Abstract (en)
[origin: WO2007148021A2] The subject of the invention is a device for packaging a thermoplastic product, especially a "non-tacky" thermoplastic adhesive, comprising an inlet (16) for product to be packaged in the liquid or pasty state, which inlet emerges in a reservoir (26) containing a coolant, the product to be packaged having a density of less than or equal to the coolant, characterized in that the inlet (16) is placed in the lower portion of the reservoir, substantially in the central part, and has shapes making it possible to eject the product to be packaged in the form of an elongate element (32) in a substantially vertically upward direction.
