Abstract (en)

[origin: WO2008000999A2] The present invention relates to a trolley comprising a chassis (1) equipped with a pair of front wheels (3) and a pair of rear wheels (4) connected to each other and to an attachment and steering member (8) which allows two trolleys to be connected, and with at least one stabilizing ram. According to the invention, the attachment and steering member (8) can move between a pulling position and a manoeuvring position, one end of the ram being mounted such that it can slide longitudinally on the chassis (1), and the trolley comprises stop-forming means (15) that can be moved between a first position in which they act as a rest for the sliding end of the ram, and a second position in which the intensity of the force exerted by the ram (3; 4) is lower.
