Abstract (en)
[origin: WO2007143771A1] The invention relates to an upper part of a truck, in particular a heat-insulated upper part of a truck, a so-called (insulated) van body with panels and the profiles holding the panels. The invention is characterized in that in order to hold the individual panels (152) in the corner areas, three different elongated profiles (3, 4, 5) are provided, namely: an essentially L-shaped outer profile (3), an essentially L-shaped inner profile (4), and an intermediate profile (5) which is preferably elastically deformable over areas of its cross section, and which is positively connected to a recess of the outer profile (3) and, by means of an expander means, for example, a screw (11), to the inner profile (4).
