Abstract (en)  
[origin: WO2008000016A1] There is a water collection apparatus for attachment to a water downpipe (1) from which a section has been deleted to form an upper discharge end (3) spaced above a lower inlet end (4). The apparatus includes a water receptacle (5) with an inflow passage (6) for positioning below the upper discharge end and an overflow passage (7) for connection to the lower inlet end. The inflow and overflow passages (6), (7) are arranged so that in a position of use the receptacle (5) is offset from the downpipe (1). There is at least one connection fitting (14), (15) for an outlet conduit from the receptacle. The inflow passage has a debris segregation screen 9 for separating out debris from incoming water flow.
