Abstract (en)
[origin: WO2007144294A1] The invention relates to an actuating device (1) of an electromechanical lock (25) for opening and/or closing a movable part (22) of a vehicle, in particular a door, a tailgate or the like, having a housing (2) and a movable protective flap (3), as a result of which a user (29) can access the actuating device, and having an actuating element (7) which is provided in the housing (2) and is intended for electrically actuating the lock (25). In order to provide an electrical or electromechanical actuating device (1) which interacts with an electromechanical lock, and which has a high level of functional reliability, it is proposed to arrange an adjacent front flap (8) in a movable manner, as a result of which the lock (25) can be actuated mechanically.
