Abstract (en)
[origin: WO2008000309A1] The invention relates to a valve device (1) comprising a valve support (2) provided with at least one multiway valve (3). The valve support is fitted with a first electrical interface device (22) of an internal electrical signal transmission device (16). This can be used when the multiway valve (3) comprises an associated third electrical interface device (24) or is unused when the multiway valve (3) contains a non-electrical recess for receiving the interface device. In any case, the multiway valve (3) comprises a second electrical interface device (23) at a distance from the valve base surface, enabling an individual control.
