Abstract (en)
[origin: CA2651918A1] The invention relates to an expansion plug (1) which comprises two expansion limbs (4) which can be expanded by introducing a screw (not shown). In order to increase stability, the expansion limbs (4) are interconnected by bent connectors (7) in their peripheral areas, said connectors forming one piece with the expansion limbs (4). The connectors (7) are bent or arched in relation to the expansion plug (1) in two imaginary planes, they can therefore be easily stretched and do not significantly impair expansion of the expansion limbs (4).
