Abstract (en)
[origin: WO2007136353A1] The present invention provides a system for tracking RFID tagged articles arranged on a bookshelf or rack. The system comprises a conveyor means coupled to the bookshelf or rack. A RFID reading device is coupled to the conveyor means, where the conveyor means is configured to move the RFID reading device to interrogate the RFID tag on each of the plurality of articles. The system provides a more efficient method of tracking and controlling RFID tagged articles, and it overcomes the problems encountered in known systems using portable RFID scanner and Smart Shelf solutions.
