Abstract (en)
[origin: EP2033557A2] The invention concerns a method for evacuation of waste water via a central suction system with a number of fixed evacuation openings (drains) for waste water, wherein a removable suction pipe is connected to a drain of a fixed waste water evacuation system with a number of fixed drains, while said waste water evacuation system is connected with a central vacuum system and wherein the other drains than that to which the suction pipe is connected during a suction operation are closed. The invention also concerns an automatic evacuation installation for waste water which comprises a fixed waste water evacuation system with a number of fixed evacuation openings (drains), a central vacuum system connected with said waste water evacuation system and means, on connection of a removable suction pipe to one of the drains of the fixed waste water system, for closing the other drains and activating the central vacuum system.
