Abstract (en)  
A decorated resin molded article (10) that can secure a high durability and can represent a sufficiently realistic metal texture in appearance is provided as follows. A metal thin film (20) is directly formed on a design surface (18) of a substrate (12) by either a physical vapor deposition method or a chemical vapor deposition method to provide a metallic decoration. Additionally, a topcoat layer (22) is formed with a thickness of 10 to 40 µm on the metal thin film. The topcoat layer comprises a transparent coating film having an adhesive property to both of the substrate and the metal thin film.
