Abstract (en)

[origin: EP2033910A1] The package has an oval shaped frangible zone (1) extended on its three distribution sides (11-13), where dimension and a position of the zone with respect to the package are defined by a specific relationship comprising parameters such as distances between ends of the zone and length of the side (11). The zone forms a distribution orifice that is closed and defined by perforations or cuts (2). The zone has a major part that is centered on the side (11) perpendicular to a stacking axis (XX), and other two parts that are arranged on the respective sides (12, 13) parallel to the stacking axis.
