Abstract (en)

Machine for processing textile webs and corresponding processing method, with the machine comprising first and second chambers (1, 2) for gathering a textile web (5), first and second driving means (3, 4) for introducing and removing textile web (5). Also, it has third driving means (8) for producing the alternative movement of web (5) between the first and second chambers (1, 2). Web (5) forms a striking path (9) between the first and second chambers (1, 2) that comprises at least a first and a second branch (13, 14). The first and second branches (13, 14) move at a longitudinal speed (L). Also, between the first and second branches (13, 14) at least one active striking unit (6) strikes web (5) at a speed that has a perpendicular component (N) that is normal to the longitudinal speed (L). This perpendicular component (N) is at least two times greater than the longitudinal speed (L).
