Abstract (en)  
[origin: EP2034116A1] The present invention provides an opening/closing unit control system capable of executing an operation for controlling an opening/closing unit in correspondence with an object to be authenticated for use for authentication operation. The opening/closing unit control system which authenticates an object to be authenticated 14 and outputs a predetermined control command to a shutter unit A in correspondence with a result of the authentication includes a first sensing portion 11a for sensing the object to be authenticated 14 and a second sensing portion 11b for sensing the object to be authenticated 14 at a position different from the position of the first sensing portion 11a. Said predetermined control command is outputted corresponding to a sensing order of the first sensing portion 11a and the second sensing portion 11b.
