Abstract (en)
[origin: EP2034119A2] The door (1) has a wing frame (3) consisting of a wing frame profile, and an outer sided filling (5) completely covering the wing frame. The filling is integrally assembled with an outer cover plate (6), an insulator (8) and an inner cover plate (7). The outer cover plate rotatably overlaps the inner cover plate around a measure, which corresponds to a height of a wing frame profile including a wing projection (4). The wing frame has an inner glass strip (15) with a seal (16), where the seal lies at the inner cover plate of the filling in a sealing manner. An independent claim is also included for a method for manufacturing a door.
