Abstract (en)

[origin: EP2034461A2] The method involves implementing a sensitive content analysis in a sensitive region for detecting and/or tracking a moving object i.e. person. A semi-sensitive region is included by a region class, where interferers e.g. cars, are arranged in the semi-sensitive region or expectable in the semi-sensitive region. A semi-sensitive content analysis is implemented in the semi-sensitive region for detecting and/or tracking the moving object, where the semi-sensitive content analysis is limited and/or modified opposite to the sensitive content analysis. Independent claims are also included for the following: (1) a device for detecting and/or tracking a moving object in a monitoring sequence (2) a computer program with program code medium for implementing a method for detecting and/or tracking a moving object in a monitoring sequence.
