Abstract (en)
[origin: CA2656269A1] The invention relates to a baited trap (1) comprising means for receiving bait or bait (4) that has already been provided in said trap (1). The trap has at least one opening (2, 3), providing access for a pest, in particular a small rodent, to the bait (4). The invention is characterised in that the baited trap (1) has at least one section (6) that can be drawn out telescopically from a retracted position (12) into an extended position (13), thus enlarging the volume of the baited trap (1). The invention also relates to one use of the baited trap, in which the telescopic section of the trap can be moved from the retracted position into the extended position in order to activate the bait. The invention further relates to the use of the baited trap as packaging for bait and to a method for producing the baited trap.
