Abstract (en)

[origin: WO2007137736A1] The present invention relates to a carried catalyst comprising a carrier on which a first catalytically active metal in the form of nano particles is applied, further comprising a second metal in the form of nano particles, and wherein the nano particles of the first and second metal are stabilized partly with S-donor ligands, and the second metal has a higher affinity to S-donor ligands than does the first metal.
