Abstract (en)
[origin: WO2008003478A1] The invention relates to a feeder for metal casting with a feeder head that encloses a compensation space (4) that is open to the environment via at least one compensation opening (5), characterized by the fact that the compensation space (4) is at least partially lined with an insulation layer (2, 10), which prevents direct contact between the liquid metal and the material of the feeder head (1) when said liquid metal flows into the compensation space (4).
