Abstract (en)
[origin: WO2007145525A1] A portion package for an at least substantially form-retaining product, such as a jelly, gel or paste in particular, comprises a compressible tub-like container (10) with a base (11) from which a wall (12) extends all round, which wall extends as far as an upper edge (13). Adhered to the upper edge is a foil (14) which closes a product space in the container. The wall of the container comprises a deforming zone (15) which extends on both sides of the product space between the base (11) and the upper edge (13) over at least a part of a height of the wall (12), and runs continuously between the sides through the base (11) of the container.
