Abstract (en)

[origin: FR2903083A1] The bag has gussets (1a, 1b) formed at a level of longitudinal edges of the bag and resulting from two inner folds (a, b) formed from a median line (c), where the bag is made of plastic material. The folds connect a front side (1c) and a rear side (1d) of the bag by connecting zones (d, e). The gusset (1b) presents an arrangement acting as a gripping handle. The arrangement is formed at a level of the folds of the gusset (1b) by combining with a connected element, which is fixed between the connecting zones. An independent claim is also included for a method of fabricating a gusseted bag made of plastic material.
