Abstract (en)

[origin: WO2007147557A1] Disclosed is a connecting element (1) comprising two legs (2) with locking means and a support section (4) that connects the legs (2). Said legs (2) protrude from the support section (4) in a transition zone (6). The aim of the invention is to allow a plurality of different profiled members to be connected in a stable manner without any problem. Said aim is achieved by assigning a compensating means (5) to the support section (4), at least in the transition zone (6). Also disclosed is an arrangement encompassing C-shaped profiled members and a connecting element of said type.
