Abstract (en)
[origin: WO2007147665A1] The invention relates to an electrical switch, especially for a hand machine tool. Said switch comprises a manually actuated pusher and a locking element for locking the pushed-down pusher, which element can be manually actuated in the opposite direction. The pusher can be displaced along a pusher path which extends at an angle, especially perpendicularly to a locking displacement path of the locking element. The invention is characterized in that the electrical switch (2) is configured as a switch module (1) comprising the pusher (11) and the locking element (6).
