Abstract (en)

[origin: WO2007147989A1] The present invention relates to a battery connection system with an anti-locking system comprising an electrical cable connecting unit (3) equipped with a lever (5) articulated between a locked position and an unlocked position. The connection has an anti-locking system preventing the said lever (5) from being lowered and therefore preventing the connection from being locked onto the terminal (9) of the battery if the connections have not been made correctly. The anti-locking system comprises a detector (6) able to move between two configurations which correspond to the locked position and to the unlocked position of the connection and is able, in the configuration corresponding to the locked position, to rest against a surface of the battery on which the terminal (9) is located.
