Abstract (en)

[origin: WO2007144385A1] Method for preventing unwanted instances of communication request signalling (KAS) in a communication network (1, 10), which, upon a communication request (KA) from a first subscriber (2) to a second subscriber (3), allows transmission of a request signalling information item (ASI) which defines communication request signalling (KAS) for the second subscriber (3), the communication request signalling (KAS) being checked for the purpose of classification before the communication request signalling (KAS) is carried out.
