Abstract (en)

[origin: EP2036725A2] The method involves driving multiple components to be assembled, by auxiliary drives (20) of respective printing units (12) for executing assembly processes e.g. washing of printing units, at the printing units. The components are driven by a main drive (19) for executing the assembly processes i.e. transfer form washing, at a feeder (10), an arm (11) and/or an inline processing device (13) e.g. cutting device, such that the assembly processes at the printing units and the assembly processes at the feeder, arm or the inline processing device are accomplished in parallel and/or simultaneously.
