Abstract (en)

[origin: EP2036727A2] The device (2) has a printing screen (12) moved with respect to a frame (4), and a squeegee (94) carried by the frame. A motor/gear motor assembly (84) rotatably drives the screen. A displacement unit is formed by a longilineal section (46), carriage (52) and motor (63). The unit is extended along a direction and displaces a motor (86) of the assembly to drive the screen. Another displacement unit is formed by a longilineal section (48), carriage (68) and motor (72). The latter unit is extended along a direction (Y) perpendicular to the direction (X). The former unit carries the latter unit. An independent claim is also included for a method for adjusting a printing device.
