Abstract (en)

[origin: EP2036728A2] A rotary printing machine includes a printing unit (01) with at least two form cylinders (09) and a noise-protection element (17) arranged between the two form cylinders. At least one pressure device operates together with one of the form cylinders, where a relevant form cylinder presses on a wall surface of the relevant form cylinder, and the organ of the pressure device is arranged either between the noise protection element and the relevant form cylinder, or on a services face of the pressure unit and spaced from the relevant form cylinder in front of the noise protection element.
