Abstract (en)

[origin: EP1829794A2] The package has a plate-shaped base (2) with front and back sides (21, 22), where a blister form-part (3) is attached to the base and is projected into the front side. A reel (4) is undetachably held in a blister space and is rotatably held in a position for winding of a flat band (41) in the space. An opening (5) is formed in the base, where an outer band-winding end is accommodated in an area before the back side for coiling of the band outwards. A separation unit (7) is provided in the base for separation of the band drawn outwards. An independent claim is also included for a blank part for manufacturing a blister package.
