Abstract (en)

A packaging 10 is suitable for a plurality of panel-type articles 12 substantially of equal size arranged such that corresponding edges 12a, 12b of the articles are substantially aligned with respect to each other. The packaging comprises a first rigid end-cap 14 placeable on and/or around the plurality of articles along first corresponding edges thereof and a second rigid end-cap 14 placeable on and/or around the plurality of articles along second corresponding edges thereof. The first and second edges of the articles are respectively contained within the first and second end-caps, and the end-caps together secure the articles therebetween. The articles are visible between the end-caps. The packaging also provides a means for transporting a stack of panels from a horizontal to a vertical position.
