Abstract (en)
[origin: EP2037019A1] A rod body (2) is glued to a heald mounting rail. The heald mounting rail (3) is configured as a bent sheet metal part having at least one bent edge (8). A connecting device (7) is associated with an accommodation space, and a holding section, and a space-filling adhesive. The holding section and the adhesive are arranged in the accommodation space. The width of a cross-section of a region in the mouth region is greater than the material thickness of the holding section in both the opening and transverse directions.
