Abstract (en)

[origin: US2008307732A1] A one-piece or multiple-piece shaped profile assembly that is used for bridging a construction element joint (2), namely expansion joints or displacement joints between two construction elements (3.1; 3.2). This assembly is shaped as a stiff joint bridge with two vertical mirror-image shaped profiles (5, 6) facing each other at both joint edges that are connected together by means of a shaped bridging profile (7) extending across the construction element joint (2). At least one of the vertical profile pieces (5, 6) is adjustable with respect to the opposing construction element to compensate for the relative displacement between the construction elements (3.1; 3.2). The vertical profile pieces (5, 6) and shaped bridging profile (7) comprise a hard polymer foam that is coated with an armoring mortar layer as an adhesive base for an additional coating layer (11).
