Abstract (en)

[origin: EP2037069A2] The drive has a gearing worm (6), which is driven by an electric motor (5), and is in engagement with a worm gear (7). Another worm gear (10) resides in engagement with the gearing worm. The worm gears are coupled with one another in a torque-transferring manner. The worm gears have gear rims (13, 14), which are meshed with each other, and are arranged at a distance to the gearing worm. The gear rims have straight teeth. An output element (15) i.e. teeth section, is provided at the gear (7). The worm gears are formed as diagonally toothed spur wheels made of plastic.
