Abstract (en)

[origin: EP2037078A2] The device has a link (9) connecting an apron of a rolling shutter to a winding tube (8) at its ends and across joints (11, 13). The joints respectively cooperate with the winding tube and the apron and include pivoting axes perpendicular to a longitudinal axis (17) of the tube. The link is slidably mounted on the tube and/or on the apron of the shutter at one of the ends. An elastic return unit (28) exerts a restoring force on the link to move the link from its retracted position into its blocking position.
