Abstract (en)
[origin: EP2037168A1] The current invention relates to a clip (1) for holding together two portions (3,4) of a light cover. This clip is operated in a "push-push" manner, in that one portion of the clip is pushed in order to position this in a gripping position, and a second portion of the clip is pushed in order to remove the clipping action. Such a "push-push" arrangement is achieved by allowing the clip to rotate around a fixing point, and having two pushing surfaces either side of this fixing point.
