Abstract (en)

[origin: EP2037470A1] The switch (D) has switch-disconnectors including respective movable contacts (5, 5a, 12, 12a) and actuating units actuating the respective contacts and including main and accessory shafts (1, 8) and main and accessory levers (2, 9). The lever (9) has an end connected to the contact (12) by a rod (10) that actuates a demultiplication device i.e. pantograph (11). A synchronizing unit is arranged between the disconnectors such that the shaft (8) is only rotated on a final rotation angle of the shaft (1) during opening of the switch to separate the contacts (12, 12a).
