Abstract (en)
[origin: WO2008000311A1] A device for training creeping plants, by means of a flexible, roughly vertical support wire, comprises a reel with a means for hooking to a carrying cable. A spool for reeling in the support wire is mounted such that it rotates. The reel comprises: - a locking lever (33) mounted to pivot around a pivoting axis between a position of clenching the support wire and a position of releasing it, with the support wire situated, in the clenching position, between a first clamp (39), fixedly connected with the locking lever (33), and a fixed second clamp (27) opposite the first clamp (39), and a means (36) for automatically returning the locking lever (33) towards the clenching position.
